

FOOTPRINTS IN SERIES...

The first, and most extensive series of *Bauanthropus* prints (named after physically superior Bau tribe of Fiji) offer a uniquely documented opportunity to scientifically predict and test hypotheses.

Print #1 (*Bauanthropus* I) will be considered independent on subsequent pages. Print #3 (left), #6 (right), and #10 (right) provide extensive opportunity for investigation.

Beginning with print #1, the undisturbed footprints were 16 inches in length. Rear portions of numbers 2, 3, and 4 had been disturbed by dinosaur tracks placed later in time. Print #3 is a disturbed track; print #6 is a special anatomical constriction track; print #10 is a track of normal placement. These provide unique observation.
