the dinosaur and human footprints ^{allegedly} ^{by Carl Bangh} ~~uncovered~~ from the Palaxy River Area in situ conditions leave no doubt that a major type of dinosaur coexisted with human beings at some time in the past. The hand-print found alongside to some human footprints is conclusive evidence that the footprints are indeed human. Therefore it would be stubborn and close-minded to discard these facts on the basis that it is destructive to the theory of Evolution as postulated by ~~Galay~~ ^{especially} when many tracks are still undisturbed in-situ.

John W. DeVilbis, Ph.D.
 Research Geophysicist
