

3. HINDERLITER PRINT

194

The Hinderliter print verifies the primary Bauanthropus print.

The Hinderliter print shows the expected profile of the human footprint with substrate material behind the toes. The ball and heel are deeper than other areas.

The depression along the outside of the print is deeper than the arch area.

All of the toes are accounted for with the first and second toes being more pronounced.

The Hinderliter print is in the first trail of Bauanthropus I prints and is identical in size to the first Bauanthropus I print excavated (shown on preceding three pages).
